

## Manage your .tel from your iPhone with My.tel

**LONDON, United Kingdom – 24<sup>th</sup> April, 2009:** Telnic Limited ([www.telnic.org](http://www.telnic.org)), the registry operator for the new communications-focused .tel top level domain (TLD), today announced that its free and open source **My.tel** iPhone application is now available for download from the Apple App Store.

The arrival of **My.tel** allows .tel owners with iPhones to manage their .tel domains without having to log on to a computer. Now they can quickly update information just before boarding a plane, travelling on a road trip, or just to quickly tell their friends which bar they are in. The **My.tel** application enables .tel owners to:

- Easily publish their location through an embedded map linked with the iPhone's GPS
- Update their status using profiles depending on how they want to be contacted at that time
- Add new, remove, hide or show items of contact information
- Manage, add or remove folders and profiles which group contact information together
- Manage privacy settings for friends and colleagues
- Add or remove keywords that help people searching for .tel owners contact information

**My.tel** can be downloaded for free from the App Store [here](#) or directly over the iPhone from the App Store application. A link to the App Store is also at <http://telnic.org/community-applications.html>. For more information and where to buy .tel domains, please visit <http://telnic.org>.
