

## **My.tel for Android available now in the Android Market**

*Manage your .tel entirely from your Android device*

**LONDON, United Kingdom – April 19, 2010** – Telnic Limited (<http://telnic.tel>), the organization behind the award-winning communications-focused .tel names, today announced that its management app for .tel names, *My.tel for Android*, is now available for free download in the Android Market and direct from <http://apps.telnic.tel>.

“Android is starting to be perceived as the non-Apple go-to operating system for smart phones and tablets in 2010,” said Henri Asseily, CTO and Chief Strategist at Telnic. “By adding *My.tel for Android* to the stable of our free and open source applications, .tel name owners can manage their contact information in real time using a multiplicity of devices and form factors, suitable to their needs at that moment in time.”

A .tel name is the only domain that can be set up and run entirely from a growing number of smart phones. It acts as a single point of contact accessible from any internet-connected device, and the data remains under the control and ownership of the .tel name owner. Hundreds of thousands of .tel names have been registered by individuals and businesses, who are now taking advantage of the easy-of-use, discoverable online presence under their control, without having to touch a traditional PC, use any web development software or pay for hosting.

Other applications for the iPhone and iPod Touch include *My.tel* and *Superbook*, the ‘one-click-save’ .tel directory which also shows the location of contacts and their time zone. Additionally, applications that provide some management functionality and .tel information look-ups are available for BlackBerry, Microsoft Outlook and Windows Mobile devices. All of the applications are free and released under BSD-like open source license.

For more information about .tel domains and the free apps and software available, please visit <http://telnic.org>.
