

Now manage .tel in 11 languages

LONDON, United Kingdom – July 2, 2009: Telnic Limited (www.telnic.org), the registry operator for the new communications-focused .tel top level domain (TLD), today announced that, as well as being able to view .tel domains in 11 languages on the web, customers can now also manage their .tel domains in those languages from today.

With well over 200,000 .tel domains registered since General Availability on March 24th customers from all over the world have been benefitting from the .tel domain. Languages now supported include English, Arabic, Chinese, French, German, Italian, Japanese, Korean, Portuguese, Russian and Spanish.

“Kebab shops in Algiers and dermatologists in New York through to hotels in Vietnam have all been happily using .tel domains, but we’re very pleased to be able to open the .tel domain up to many more people around the world,” said Justin Hayward, Communications Director at Telnic Limited. “The .tel is a revolution in simplifying and lowering the cost of publishing on the internet under an individual’s own space and we want to remove as many barriers for as many people to take advantage of this as possible.”

User guides have also be translated in conjunction with the control panel, access to which is supplied to .tel registrants through ICANN-accredited registrars or .tel service providers. To view the control panel and guides in the language of their choice, users can simply change the settings on their browsers.
